

Dear Hiring Manager,

I am writing to express my interest in opportunities with UNDP. I hold a Bachelor of Engineering in Electronics and Communication and bring hands-on experience in Python backend development, along with a strong commitment to continuous learning in emerging technologies such as AI and Large Language Models.

I have professional experience as a System Engineer at Infosys and as a Junior Java Developer at TechnoTharanga Solutions, where I worked on backend development, database operations, and debugging. Through these roles, I developed a solid foundation in programming, problem-solving, and working in structured environments.

In addition, I have built several practical projects using Python and Flask, including a CRUD web application, a blog platform with authentication, and a machine learning model for house price prediction. These projects have strengthened my understanding of REST APIs, database integration, and real-world application development.

Currently, I am actively upskilling in FastAPI and LLM-based applications, focusing on building intelligent backend systems and AI-powered solutions. I am particularly motivated to apply my technical skills in an organization like UNDP, where technology can be used to create meaningful social impact.

I am a quick learner, adaptable, and committed to contributing effectively to team goals. I am also open to short-term assignments and flexible roles, and I am eager to grow within a mission-driven environment.

Thank you for considering my application. I would welcome the opportunity to contribute to UNDP's initiatives and further develop my skills in a challenging and impactful setting.

Sincerely,

Meghana V
